

QUALITY MANUFACTURING

REC products and production processes are certified according to multiple industry standards by independent third parties, solidifying the fact that REC meets the highest quality standards for a long-lasting product and performance:

IEC 62941
Quality System for PV Module Manufacturing
ISO 9001: 2015
Quality Management System

QUALITY OF TESTING

REC uses its own test lab to ensure high quality during product development and as a part of continuous quality review.

The test lab is certified by VDE to TDAP standards, underlining the high quality of test processes as well as REC's all-round exactitude in the measurement and the calibration of test equipment. This means that at every stage, REC products are tested to the highest levels of accuracy.

ENVIRONMENT + SAFETY

REC's first consideration is always to ensure the health and safety of employees, customers and the environment. To ensure our products meet the highest standards, our factories are certified to all relevant safety standards:

ISO 14001: 2015
Environmental Management
ISO 45001:2018
Health and Safety Management
RoHS 863/2015
Restriction of Hazardous Substances

REC WARRANTY

The best warranty is one you never have to use, and to support REC's high quality, the REC ProTrust Warranty is a premium warranty package that protects our customers in case of a claim.

Offered exclusively by trained REC Certified Solar Professional installers, the unique coverage of the REC ProTrust Warranty gives you greater savings, economic security, and more energy autonomy.

Eligible

- PRODUCT** Covers panel defects and promises superior quality for at least 20 years. All panels are eligible for a **+5 year product warranty extension** as part of the REC ProTrust Warranty.
- PERFORMANCE** Ensures that REC panels perform exactly as expected, every year for 25 years. Higher warranted power and annual yield, enables greater ROI predictability.
- LABOR** Unique to the REC ProTrust Warranty, this gives added protection in the unlikely event of servicing being required.

The table below provides an overview of REC's leading warranty by system size:

REC warranty type	REC PROTRUST WARRANTY		REC STANDARD WARRANTY
Installer group	Exclusive to REC Certified Solar Professional installers		All installers
System size	<25 kW	25-500 kW	All
Product Warranty	25 years*	25 years*	20 years
Labor Warranty	25 years*	10 years*	0
Performance Warranty	Minimum power in year 1	Year 2-25 maximum annual degradation	Guaranteed % of power in year 25
REC Alpha ⁺ Pure		0.25%	92.0%
REC N-Peak 2	98.0%		
REC TwinPeak 4		0.5%	86.0%

* Certain conditions may apply. Installations must be registered via REC SunSnap app or REC Certified Solar Professional Portal to be valid. Visit www.recgroup.com/warranty for further details.

SOLAR'S MOST TRUSTED

REC: CERTIFIED FOR QUALITY

SALT MIST RESISTANCE

The higher concentration of salt in coastal environments increases the chance of discoloration and degradation in a solar panel. This can potentially lead to panel breakdown if not properly protected against salt mist.

All REC panels pass the IEC 61701 Severity Level 6 standard, ensuring the highest protection against environmental salt mist conditions.

35 MM HAIL RESISTANCE

Hail can cause significant damage to solar panels, breaking the glass and other components which can lead to power loss. REC panels are certified to IEC 61215, including the ability to resist the impact of a hailstone up to 35 mm in diameter and 20.7 g mass. This far surpasses the resistance offered by most competitors of 25 mm diameter at 7.5 g.

DYNAMIC MECHANICAL LOAD

Strong winds, as well as other common environmental conditions, can have a major impact on the long-term performance of a solar panel.

REC certifies all of its panels to IEC 62782, which simulates the effect of strong winds and verifies a panel's high reliability under the different forces seen in real life weather conditions.

AMMONIA RESISTANCE

Ammonia is a caustic gas that can develop in livestock barns. In high concentration, it can cause a chemical reaction which leads to corrosion of surrounding objects and buildings, including solar panels.

All REC panels have passed the IEC 62716 test standard, which ensures resistance to high levels of ammonia concentration in the atmosphere.

RESISTANCE TO FIRE

Fire is incredibly rare in solar panels, and is generally a result of poor installation practices or defective connections. To protect against this, REC certifies its solar panels to all relevant international and local ignitability standards, including:

- UL 790 (modified acc. to UL 61730)
- ISO 11925-2

NON-UNIFORM LOADS

A solar installation usually sees the panels installed on an angle. Testing of the panels however, is performed horizontally meaning the load distribution can affect a panel differently to testing.

For this reason, REC certifies its panels to the IEC 62938 standard. This determines a panel's continued high performance under the build-up of loads that are unevenly spread.

PID RESISTANCE

Potential Induced Degradation (PID) is a power loss phenomenon at system level caused by leakage currents and heightened by high voltages, temperatures, and levels of humidity.

By using unique technology, REC was one of the first manufacturers to ensure all of its panels were PID-free. Today, all REC panels pass an enhanced IEC 62804 PID certification, ensuring the highest level of resistance.

CYCLIC WIND LOADS

Cyclones can cause incredible damage to buildings and turn common objects into dangerous projectiles.

To ensure safety in cyclone regions, REC certifies its panels to AS 4040.2 and NCC 2016 LHL at Australia's premier cyclone testing centre, guaranteeing thorough and comprehensive testing of the panels to ensure they can withstand the worst of conditions.

TOP PERFORMER RATING

The annual PVEL independent panel testing program sees numerous solar manufacturers and their products put through a series of exacting tests.

Every year since 2016, REC has been rated as a Top Performer, demonstrating the lasting quality promise we make to our customers.
